sudo apt install (LIST OF COMMAND TO INSTALL APPS IN UBUNTU)

on June 27, 2019

To install different apps in ubuntu we frequently use **sudo apt install <appname>**. Here are some command to install apps. This post will be updated frequently with new command list.

List will contain command to install and add the required repository (if needed).

- **CherryTree**

A hierarchical note taking application, featuring rich text and syntax highlighting, storing data in a single xml or sqlite file. Written by Giuseppe Penone (aka giuspen).

```
sudo apt install cherrytree
```

- **Meld**

Meld is a visual diff and merge tool targeted at developers. Meld helps you compare files, directories, and version controlled projects. It provides two- and three-way comparison of both files and directories, and has support for many popular version control systems.

```
sudo apt install meld
```

- **nethogs**

NetHogs is a small 'net top' tool. Instead of breaking the traffic down per protocol or per subnet, like most tools do, it groups bandwidth by process.

```
sudo apt install nethogs
```

- **Curlftpfs**

If you want to mount your ftp folder in your file explorer. Then you require these package.

```
sudo apt install curlftpfs
```
