

termux : installing matplotlib

on February 18, 2020

Installing matplotlib on termux requires some more dependencies.

First we need to install Ubuntu on termux. For that, we can use AnLinux. Read this post for more details:

<http://lnjpitworld.blogspot.com/2020/01/install-ubuntu-on-android.html>.

First we need to install dependencies

```
apt install libfreetype6-dev
```

After installing these dependencies and python3. We can now install matplotlib without any errors.
