

SpaceDesk, wireless display solution

on April 07, 2018

Hello Lnjpitians,

We all love coding. and always try to code by analyzing some other codes at the same time. then we feel that we should have multiple desktop but its not possible to arrange one easily and configure it.

I was wondering that is there any software which can make my android phone as a second display and use it as secondary monitor. Then I found it.

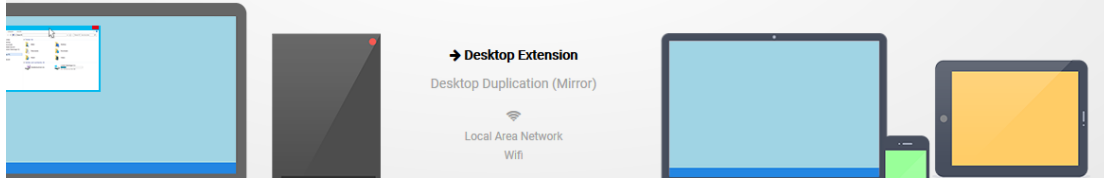

So you can try it. This is available for both windows and android also.

Windows Network Display Monitor Software

spacedesk expands the Windows desktop computer screen to other computers over the local area network.
