

Vim : .vimrc configuration

on July 04, 2019

Apart from customising vim each time, we can also make our changes permanent. So that each time we open vim, we get our customised vim. To do that, we need to create **.vimrc** file in home directory of current user. Each time vim starts it looks for **.vimrc** file and loads it.

So how to set commands in **.vimrc** configuration file. Well, it's pretty easy, all you have to do is write those commands but this time without colon (:). It mean while we are working in vim editor we need to type **:set nu** to show line number. The same command you can write in **.vimrc** without colon. So in **.vimrc** you have to write **set nu**.

In **.vimrc**, you can also write comments line, followed by (") opening double quote. You can also map a key to any snippet.

Here is my settings:

"remap single open brackets to both opening and closing

```
inoremap [ []<left>
inoremap { {}<left>
```

```
"show line number
set nu
```

```
"show relative line number
set rnu
```

```
set noswapfile
set cursorline
set tabstop=4
set history=100
set scrolloff=10
set ruler
syntax on
set showmode
set autoindent
set foldcolumn=4
set foldlevel=2
set foldmethod=indent
set foldclose=all
```
