

## mpv : lightweight open source video player

on February 25, 2020

mpv is a free (as in freedom) media player for the command line. It supports a wide variety of media file formats, audio and video codecs, and subtitle types. It is based on MPlayer and mplayer2. It is free and open-source software released under a mix of licenses including GNU General Public License version 2 or later (GPLv2+), with parts under GNU Lesser Public License version 2.1 or later (LGPLv2.1+), and some optional parts under GNU General Public License version 3 (GPLv3).

It runs on several operating systems, including the Unix-like operating systems Linux, BSD, and macOS, and on the non-Unix Windows, along with having an Android port called mpv-android. It is cross-platform, running on ARM, PowerPC, x86 / IA-32, x86-64,

and MIPS architecture.

It doesn't have menu bar or other UI. Shortcuts are there for help you.
