bpython

on January 03, 2020

bpython is an interface to the Python interpreter that provide user with all the features in-line, much like IDE. Some of the features are:

- auto indentation
- syntax highlighting
- autocomplete(tab key)
- automatic documentation popups for functions including parameters(type (after function name)
- keeps history(using arrow key)
- rewind code lines (ctrl r)

Works on python 2.7 or 3+.

Works on Linux, BSD, OS X and Windows(with some work)

Site: https://bpython-interpreter.org/

```
pip3 install bpython
```

LINUX   OPENSOURCE   PYTHON   UBUNTU
