Use same keyboard and mouse in multiple local machine

Hello LNJPITians,

Here I got some thing for you. Suppose you are working on two computers simultaneouly and each time you have to change keyboard and mouse and you are feeling so angry on doing it. What's the solution??

Here it is. You can use same keyboard and mouse in multiple local machines at the same time. you will feel like all the system are connected to each other Use same keyboard and mouse in multiple local machine

To do this task, we need two software.

1) TightVNC (server)

2) Win2vnc (client)

We can configure these software for more than two computers, but its your work now. I have tried this on two computers and its working fine.

**These are the following step, you need to follow in order to do this:**

1) Install Tight VNC

https://www.tightvnc.com/download.php

Download the windows version, either 32 or 64 based upon on your system type.

It has a java based version also but didn't tried that.

2) Next- next – next
3) Then you will ask for set password, set it.
4) Now run this application.

5)

Don't forget to setup these password.

6) Install win2vnc for client.

https://sourceforge.net/projects/win2vnc/

7) After install and run it. You will get this dialog box

8)   You have to enter ip address of server system.

Do to that you could use ipconfig in command prompt.

9)   You have to enter ip and port like 192.168.233.41:5900

10)   After that its done. There are so many options like direction and edges and all, that's your job. Play with it.

Thanks for reading.
