1. Play any PC games to full Screen

Hi friends…

More of us are addicted to playing games on PC. Some of those games does not support full screen resolution because the game has resolution 1024 x 768 and our PC resolution is 1366 x 768 (Generally).. So that the game screen will not cover the full screen. The solution is here..
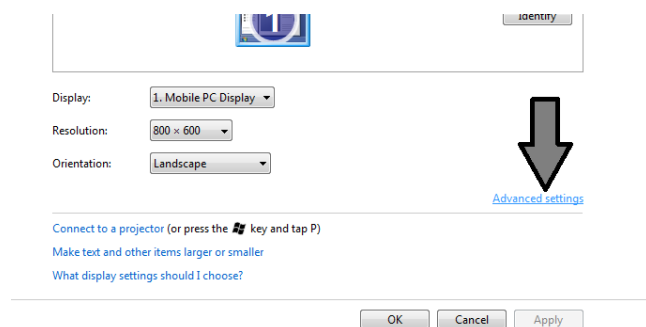

Step 1:

Change your screen resolution to lowest value.

Step 2:
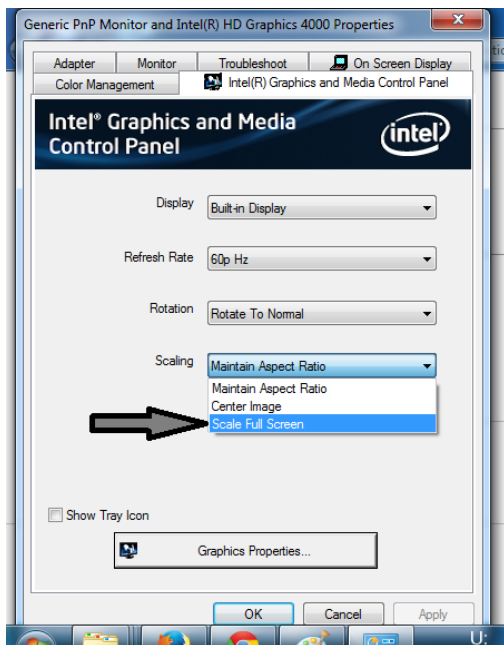

The go to advance setting in screen resolution window.

Step 3:
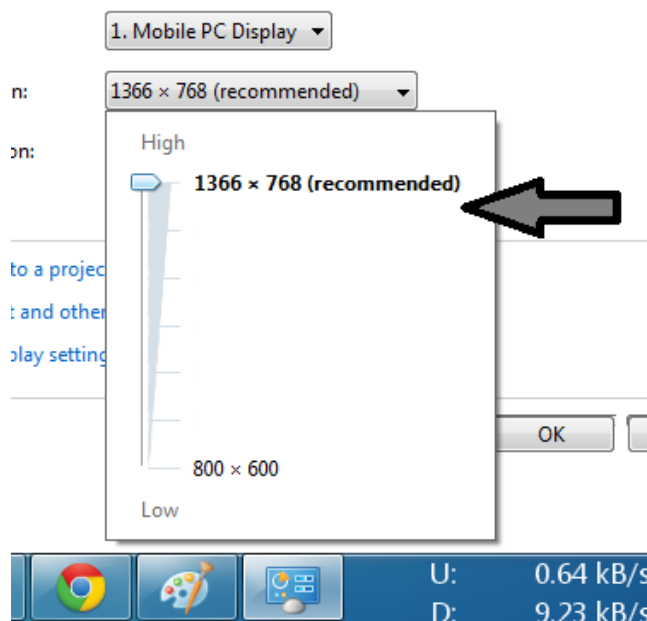

Click on intel Graphics & media control panel

Step 4:

In scaling drop down list choose the "Scale full screen"....

Step 5:

Now change your resolution as before.

That's it.

Now enjoy your games in full screen..........

Thank you....
