NeoVim : hyperextensible Vim-based text editor

on March 11, 2020

Features

- Modern GUIs
- API access from any language including C/C++, C#, Clojure, D, Elixir, Go, Haskell, Java, JavaScript/Node.js, Julia, Lisp, Lua, Perl, Python, Racket, Ruby, Rust
- Embedded, scriptable terminal emulator
- Asynchronous job control
- Shared data (shada) among multiple editor instances
- XDG base directories support
- Compatible with most Vim plugins, including Ruby and Python plugins

Installation

Windows

Download nvim-win32.zip or nvim-win64.zip depending on your system architecture. Extract the files where you want to install nvim.

For running neovim go to *bin* folder and run nvim-qt.

Config file - C:\Users\lnjpitworld\AppData\Local\nvim\init.vim. If it
is not present create it.

Some vim configuration are discussed here.
